Education

MS in Computer Science
TU Munich, Germany, (2021 - 2025)

- **Focus**: Software engineering and testing with projects in data analysis, web dev, and distributed systems.

BS in Computer Science
SRM Institute of Science & Tech, India, (2014 - 2018)

Relevant Skills

Programming Languages: Typescript/Javascript, Python, C++

Technologies:

- **Software Testing** - Jest (JS), unittest (Python)
- **Web development** - React, Node.js, Express.js, PostgreSQL, REST API.
- **Version control & workflows** - Git, code reviews
- **Modern development tools** - VScode
- **AI coding harness**: Opencode

Experience

Werkstudent Security Analyst
Siemens AG, Germany, (2021 - 2025)

- Automated data collection by writing JS web parsers with a comprehensive, structured test suite using Jest. Caused a 27% uptick in notifications created.
- **Handled customer support to directly with clients. Understood how better to service their needs and worked with backend engineers to suitably modify APIs.**

C++ Software Developer
Siemens AG, India, (2018 - 2020)

- Responsible for system critical bug fixes in a mature C++ codebase for Siemens Comfort HMI Panels.
- **Handled direct calls with clients in 4 different countries to better understand their problems and fix the reported bugs**.
- Introduced TLS in the previously plaintext communication between Comfort panels and PLCs.
- Built an inventory management system using React and Node.js along with an interactive dashboard.

Projects

Modern Customer support application
Imero GmbH

- Built a customer support tool with chat functionality from scratch using Node.js and React for Imero's support team.
- Tested using Jest and Postman.

The Pegasus Effect
TU Munich

- Collected, cleaned, and analyzed open-source social media data on Pegasus Spyware victims using Python. Data was analyzed and visualized using Pandas and Matplotlib.

ChordPlusPlus
TU Munich

- Built a fault-tolerant, distributed hash table in modern C++. Tested using GTest.
